

Abstract of the Disclosure

A carpet backing, such as a primary carpet backing, is a composite material comprising a woven fabric mechanically coupled to a non-woven fabric. The woven fabric component may include monofilament warp yarns and monofilament fill yarns.

5 The yarns may be woven using a plain weave. The non-woven fabric component comprises synthetic fibers. The carpet backing combines the dimensional stability of non-woven fabric backings and the healability of woven fabric backings.
